Abstract

This quick-start guide is a summary of the TEXMACS commands used to write scientific papers. Most commands are available in four ways: from the menu entries, by keyboard shortcuts, by LATEX-like keyboard inputs (type \ and the name of the command, then ↵) and by the icons of the toolbars. In the yellow boxes, these are given in this order. The keyboard shortcuts are shown as on MACOS; on other systems, the menus of TEXMACS show the shortcuts of your system.
